

Cloud Integration iFlow editor, the main categories are: ([SAP Help Portal](#))

1. Participants

Used to define systems participating in the integration.

- Sender
 - Receiver
 - Reference Participants
-

2. Process

Used to structure processing logic.

- Integration Process
 - Local Integration Process
 - Exception Subprocess
-

3. Events

Control the start and end of processing.

- Start Event
 - End Event
 - Error End Event
 - Escalation End Event
-

4. Connectors

Used to connect flow steps.

- Sequence Flow
 - Message Flow
-

5. Mapping

Used for message transformations.

- Message Mapping
 - XSLT Mapping
 - Operation Mapping
-

6. Message Transformers

Most frequently used palette section.

- Content Modifier
- Filter
- XML to JSON Converter
- JSON to XML Converter
- XML Modifier
- General Splitter
- Iterating Splitter
- Gather
- Sort
- Script (Groovy, JavaScript)
- Content Enricher
- Poll Enrich
- ID Mapping
- Number Range
- Message Digest
- Data Store Operations
- Converter steps

(Some availability depends on tenant version.) ([SAP Help Portal](#))

7. Call

Used to invoke subprocesses or external systems.

- Request Reply
- Send
- Process Call
- Looping Process Call
- Idempotent Process Call

([SAP Help Portal](#))

8. Message Routing

Used for routing and branching.

- Router
- Multicast (Parallel)
- Multicast (Sequential)
- Gather
- Splitter
- Join
- Recipient List

([SAP Help Portal](#))

9. Security Elements

Used for encryption, signatures, and certificates.

- Encryptor
- Decryptor
- Signer
- Signature Verifier
- PKCS#7 Signer
- PKCS#7 Verifier

([SAP Help Portal](#))

10. Persistence

Used for storing data/messages.

- Data Store Operations
 - Write
 - Get
 - Select
 - Delete
- JMS operations

([SAP Help Portal](#))

11. Message Validator

Used for validation.

- XML Validator
- JSON Validator
- Schema Validator

([SAP Help Portal](#))

12. Adapters (Message Flows)

These are not flow steps but are available from the adapter palette.

Common adapters include:

- HTTP
- HTTPS
- SOAP
- OData V2
- OData V4
- SFTP
- FTP
- ProcessDirect
- IDoc
- XI
- AS2
- JMS
- Mail
- SuccessFactors
- RFC
- AMQP
- MQTT
- Kafka
- Open Connectors

(Availability depends on your Integration Suite license and version.)

For CPI interviews

The palette components you should know deeply are:

1. Content Modifier
2. Router
3. Filter
4. General Splitter
5. Iterating Splitter
6. Gather
7. Multicast
8. Request Reply
9. Process Call
- 10.Exception Subprocess
- 11.Groovy Script
- 12.Message Mapping
- 13.Content Enricher
- 14.Data Store Operations
- 15.Encryptor/Decryptor
- 16.JMS Queue

These 16 components alone cover the majority of real-world CPI projects.
